ChengHao Display model CH700WV05A-CT is a color active matrix thin film transistor (TFT) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT LCD panel, a driving IC, a high brightness back-light, a capacitive touch panel and FPC. This TFT LCD has a 7.0 (16:9) inch diagonally measured active display area with WVGA (800 horizon -tal by 480 vertical pixel) resolution.

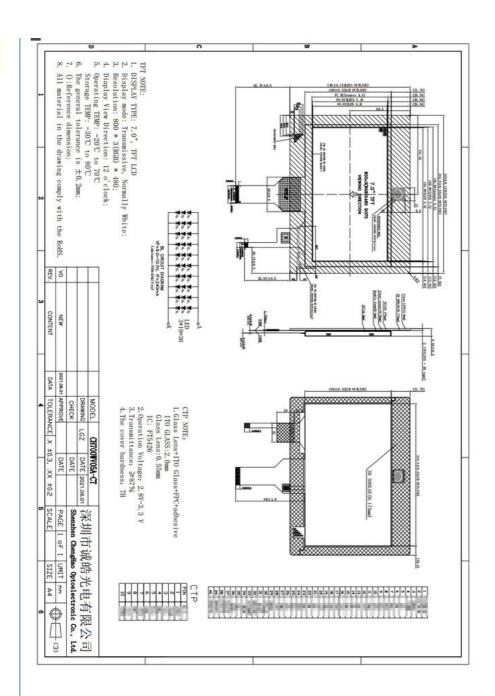

The driver used for this project is the Himax and can display 16M colors by 24 bit R.G.B. signal input. The driver is mounted on the glass and the interconnection via FPC including components to drive the display module. Support RGB interface.

In addition, FPC can also be customized according to customer requirements, such as modifying back -light and CTP structure, interface definition, etc.

RoHS Compliance & Halogen Free.
